

# Smart Home

Keep an eye on you home

MEGAMONT

## Complete Home Control and Automation All in one...

### Energy saving

Reduce energy costs.  
The system allows you to identify areas of excessive energy consumption and reduce the costs, without sacrificing your comfort.

### More Comfort

Your home dynamically adapts according to your needs. The app allows you precise programming of each device and its functioning.

### Remote Control

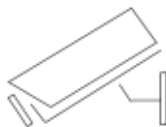

Control your home from your smartphone, tablet or any other smart device and stay in touch with your home wherever you are.

### Easy automation

A complete automation platform is highly adaptable to different automation scenarios and upgrades.

### Video monitoring

Remote video monitoring allows you to stay in touch with your home and to receive alerts.

### Alerting

24/7 alerting.  
The system can be customized to send you emergency and notification messages.

# Smart Home

Home control from anywhere

## What is Smart Home and how it works?

A complete control and automation platform including local controllers, cloud servers, user and admin applications that all work together seamlessly. You can control your home from anywhere, automate all devices, see what's going on when you are away, and get instant alerts in case of any security or safety issue.

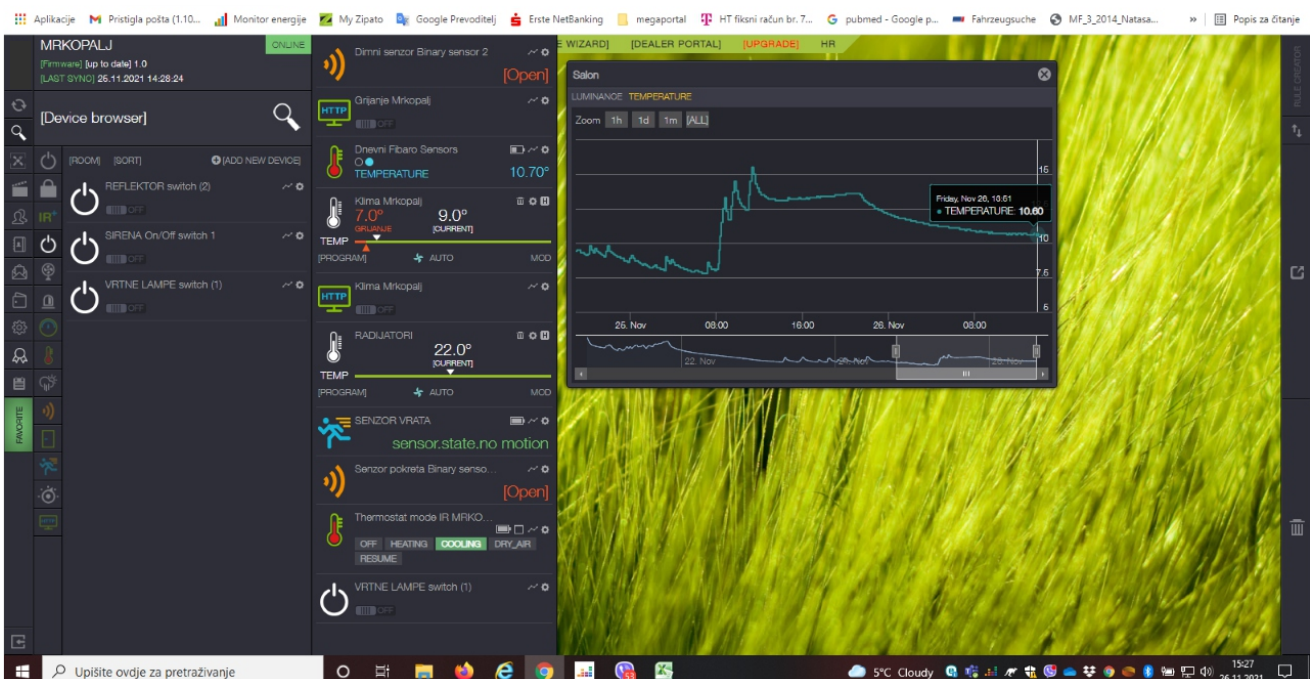

With Smart Home you can remotely control and automate lighting, heating, air-conditioning, shades, home appliances, curtains, irrigation, home entertainment...almost anything in your home. You can also optimize your energy consumption, without sacrificing your comfort.

## Energy Monitoring

Our intelligent control technology enables you to monitor and reduce energy consumption when using smart home electronics. Conserve resources, and save money— all without sacrificing comfort or convenience. You can see exactly how much electricity your home consumes per each device – right now, on your PC or smartphone. It would surprise you how much waste consumption there is when some connected appliances are left turned on. By understanding how much electricity your home uses – or wastes – you can save energy and money.

Research shows users save up to 20% in monthly energy expenses when they start tracking their waste energy consumption .

But why bother when Smart Home can - automatically do it for you.

# Smart Home controllers and interfaces

Get In Touch With Your Home with your touchscreen. Whether it's on the table or wall-mounted, the touchscreen puts your home at your fingertips.

## What you can do with your Portal

Our web portal provides a private, secure access to your home for you to monitor and manage your home's security. You'll also be able to review home event history, set up email and text alerts, and customize your system by adding additional lights, appliances and devices. Once you've signed in, the web portal displays the name of your account and a welcome message that includes your name, the current date, a Sign Out link, the date and time of your last sign-in.

You can see whether the security panel is armed, disarmed, or sounding an alarm, the overall state of devices and what connection path is being used, the current status of your devices, device activity that might be considered unusual, the scenarios which you can activate electricity consumption of all meter devices

## Smart Thermostat

The Smart Thermostat can help you conserve energy without sacrificing your comfort.

The perfect thermostat should be invisible. There shouldn't be any special device hanging on a wall. It should be adjusted easily to automatically maintain perfect ambient temperature while saving as much energy as possible.

**Multiroom.** Adjusting the temperature in each room separately could be done by just playing with your smartphone. You can adjust each valve separately, so you can close the radiator valves in your living room while keeping them open in your children's room.

**Remote control.** Can you count how many times you came to your cold apartment wishing someone had heated the room for you? Smart Home can do that. You can adjust your heating and cooling from everywhere in the world, using your smartphone.

**Scheduler.** Allows you to automatically activate heating and cooling. It is extremely easy and intuitive. You can do it online through a web browser, using your mouse and keyboard. You can adjust different temperature presets (e.g. Comfort, Economy, Sleep...), and later activate these modes with a simple click of a button.
